

Fig. 2. Vigorous monsoon over Madhya Maharashtra

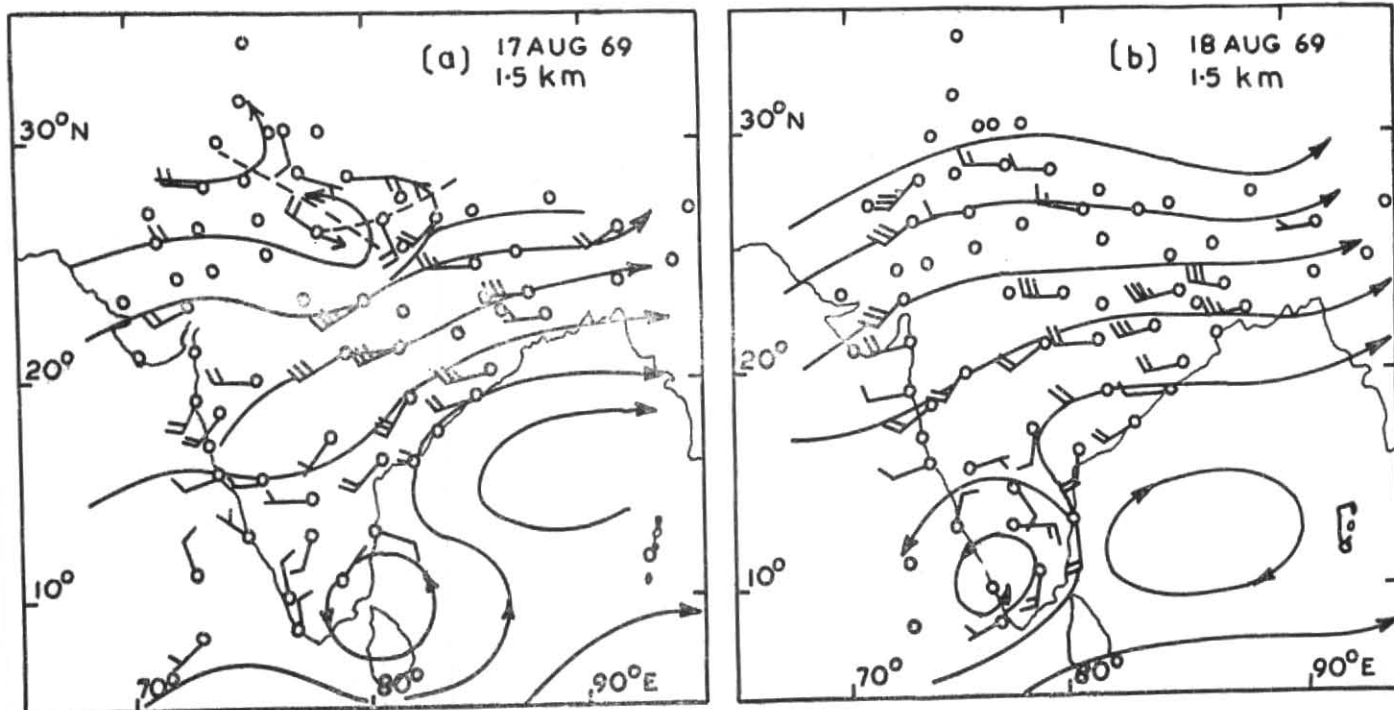

Fig. 3. Weak monsoon over Madhya Maharashtra

4. The study indicates that though on most of the occasions of the passage of surface or upper air lows across south Peninsula during break monsoon conditions, rainfall is scanty in Madhya Maharashtra, on the rare occasions when the upper air cyclonic circulation associated with the system extends to Madhya Maharashtra, the region may get a spell of vigorous monsoon.

5. Author's grateful thanks are due to Shri A. Thiruvengadathan, Retd. Director, for the guidance, to Shri H.M. Chaudhury, Retd. Additional Director General of Meteorology and S/Shri P.J. Rajagopalachari, M.C. Sharma and N.V. Iyer for supply of unpublished data and to Shri C.E.J. Daniel, former Regional Director, Bombay for facilities afforded for the study.
